Outline

- ◆Checker
- ◆Makefile

2023/5/3 Andy Yu-Guang Chen 2

Outline

- ◆ Checker
- ◆ Makefile

2023/5/3 Andy Yu-Guang Chen 3

Checker

- ◆ How to use the checker?
 - Step 1: Make sure you put your checker, testcase and your output file testcase_out.txt at the **same folder**.
 - Step 2: Make sure the format of your output file is correct.
 - Step 3: Key in the following commands.
`./pa3_checker your_input_file your_output_file`

For example:

```
./pa3_checker t10.txt t10_out.txt
```

2023/5/3 Andy Yu-Guang Chen 4

Checker

◆ If you do not have permission to execute checker:

```
./pa3_checker: Permission denied.
```

➤ Key in the following commands.

```
chmod 755 pa3_checker
```

For example:

```
chmod 755 pa3_checker
```

2023/5/3 Andy Yu-Guang Chen 5

Checker

◆ Example t10.txt

1	10
2	0 4181
3	1 2698
4	2 855
5	3 9339
6	4 5206
7	5 1920
8	6 5404
9	7 9634
10	8 8535
11	9 9551

2023/5/3 Andy Yu-Guang Chen 6

Checker

◆ If your program is correct, you will get “a happy frog” and the result of the area.

```

1 145.86962 393.43601 57390.3612730162
2 65.00631 64.31683
3 73.45563 36.72965
4 22.65869 37.73387
5 72.10470 129.51998
6 80.84839 64.39213
7 50.74854 37.83360
8 72.38002 74.66149
9 77.27416 124.67299
10 68.59546 124.42514
11 73.63383 129.70940
12 9 3 V 6 1 5 2 V H V H 0 4 V H 8 7 V H

```

testcase_out.txt

result

2023/5/3 Andy Yu-Guang Chen 7

Checker

◆ If your program is wrong, you will get “a sad frog” and the detail.

```

Error! Expression check: duplicated operand

```

result

2023/5/3 Andy Yu-Guang Chen 8

Checker

◆ Error type:

- Normalized Polish Expression
- basic rule (aspect ratio, error rate of module area...)

result
Andy Yu-Guang Chen

2023/5/3 9

Checker

◆ Normalized Polish Expression

- For example, NPE=0 1 H 2 3 V **V**, which V is the duplicated operator.

Error! Expression check: duplicated element in serial
-> V V

Andy Yu-Guang Chen

2023/5/3 10

Checker

◆ Normalized Polish Expression

- For example, NPE=0 1 H 2 **2** V H, which 2 is the duplicated operand.

```
Error! Expression check: duplicated operand
-> 3
```

2023/5/3 Andy Yu-Guang Chen 11

Checker

◆ Normalized Polish Expression

- For example, NPE=1 2 V 3 0 H V **H**, which # of operand =4. Hence, # of operator should be 3.

```
Error! Expression check: # operator and # operand don't match
-> operand: 4 operator: 4
```

2023/5/3 Andy Yu-Guang Chen 12

Checker

◆ Normalized Polish Expression

➤ For example, NPE=0 1 V 2 **50** H V, which 50 is the wrong operand.

Error! Expression check: wrong operand
-> the range of the operand should be 0-3

2023/5/3 Andy Yu-Guang Chen 13

Checker

◆ Normalized Polish Expression

➤ For example, NPE=1 2 V H 3 0 V. The case, **1 2 V H**, which operand(=2) isn't larger than operator(=2).

Error! Expression check: violate balloting rule

2023/5/3 Andy Yu-Guang Chen 14

Checker

◆ Basic rule

- For example, error rate of module area is out of 1%.

2023/5/3 Andy Yu-Guang Chen 15

Checker

◆ Basic rule

- For example, ratio of module is out of range.

2023/5/3 Andy Yu-Guang Chen 16

Outline

- ◆ Checker
- ◆ Makefile

2023/5/3 Andy Yu-Guang Chen 17

Makefile

- ◆ In demo session, TA will test your makefile in the following commands.
 - *make all*
 - *make run input=your_input_file output=your_output_file*
 - *make clean*

2023/5/3 Andy Yu-Guang Chen 18

Makefile

◆ *make all*

```
[110521009@eda359_forclass PA3]$ make all
Creating object directory
Compiling: src/main.cpp -> build/main.o
Compiling: src/SA.cpp -> build/SA.o
Compiling: src/functions.cpp -> build/functions.o
Generating executable file: build/main.o build/SA.o build/functions.o -> exe
[110521009@eda359_forclass PA3]$ ls
build exe makefile src t10 out.txt t10.txt testpattern
[110521009@eda359_forclass PA3]$ ls build/
functions.o main.o SA.o
[110521009@eda359_forclass PA3]$
```

After *make all*, an executable file and object file are generated

2023/5/3 Andy Yu-Guang Chen 19

Makefile

◆ *make run*

```
[110521009@eda359_forclass PA3]$ make run input=t10.txt output=t10 out.txt
./exe t10.txt t10 out.txt
Yeah! I did it right :)
[110521009@eda359_forclass PA3]$
```

Note that using `cout` will slow down runtime.

2023/5/3 Andy Yu-Guang Chen 20

Makefile

◆ *make clean*

```
[110521009@eda359_forclass PA3]$ ls
build exe makefile src t10_out.txt t10.txt testpattern
[110521009@eda359_forclass PA3]$ ls build/
functions.o main.o SA.o
[110521009@eda359_forclass PA3]$ make clean
Removing objects
Removing executable file
[110521009@eda359_forclass PA3]$ ls
makefile src t10_out.txt t10.txt testpattern
[110521009@eda359_forclass PA3]$
```
